BRIK SERIES

Mechanical briquetting presses

Mechanical briquetting presses, thanks to the high pressure generated in the compression chamber (about 2000-2500 kg/cm²), produce a high-quality briquette, and they are designed and manufactured to be reliable and long-lasting. The superior ratio between hourly output per kWh and the low operating costs of the mechanical briquetting machines are particularly advantageous compared with other technologies available on the market.

The Di Più Systems BRIK series mechanical briquetting presses are machines designed to meet the requirements of customers that need to compact large quantities of waste or fibre and look for a strong, efficient, high-performance machine built to last and designed to work around the clock without problems. These machines have been perfected over thirty years of experience and include advanced technical and dependable solutions that are unique to Di Più Systems.

FEATURES AND BENEFITS SERIES BRIK

The BRIK series mechanical briquetting press develops a compression force of approximately 2000 kg/cm² bar to obtain a high quality briquette of a high density and a remarkably reduced volume, without the addition of binders.

Features and benefits series BRIK

- high reliability and long operational lifetime
- extremely low maintenance and operating costs
- high structural strength
- high compression pressure
- flexibility to produce round, round with the hole, or square shape briquettes
- easy integration into an existing production line
- significant volume reduction ratio
- reduction of handling and transportation costs

TECHNICAL DATA

BRIK SERIES		MB50	MB60	MB70	MB80	MB90	MB100	MB110	MB120
PRODUCTION CAPACITY*	KG/H	180/300	400/600	600/800	700/1300	1100/1800	1300/2300	1400/2500	1600/3000
DIAMETER	MM	50	60	65-70	75-80	85-90	90-95-100	110	120

WEIGHT	KG	2200	2800	3900	4800	5200	7800	8200	8600
* THE PRODUCTION CAPACITY DEPENDS ON THE DENSITY OF THE DUST. THE CAPACITIES LISTED ABOVE ARE INDICATIVE.
