Multi-Stage
SCF Dryer

The Multi-Stage SCF Dryer gives maximum flexibility to dry various products.

Multi-Stage SCF Dryer

By reloading to another conveyor stage in our Multistage Dryer, you can develop a deeper bed through the use of slower moving conveyor in each consecutive stage. This eliminates shrinking problem and results in shorter dryers or more capacity.

A single machine incorporating independent drying conveyors with gentle product turnover for varying loading and drying times, multiple air direction reversals, together with multiple temperature and humidity control zones, assuring the most uniformly dried products in the minimum floor space.

Benefits

- Proven uniform drying solution for problem high shrinkage and high initial moisture content products.
- Increased production capacity within a smaller footprint.
- Fully accessible high and ultra-high sanitary design features.
- Easy to use intuitive smart PLC zonal control of all process parameters.
- Energy efficient fully insulated dryer, with air recirculation and heat recovery options.
- Engineered transfer zones to minimize product breakage, sticking and agglomeration at critical process points.

CPM Holdings, Inc. is a diversified leading global supplier of process equipment and engineered technologies that sustainably feed, fuel, and build a better world.
